Revolutionary Movements
Dissected And Exposed
by Willard F. Harrington

The Bumperets have other reac
tions to their own existence. Mr. Bum
neret, in particular, feels that they
are not really solutions of their
problems. They are not. They are
merely a reaction to the revolution,
and as such, they are not the solutions
to their problems. However, they
are the only solutions that are
available to them. The Bumperets
are not solutions to the revolution,
but they are solutions to their own
problems, and therefore, they are
solutions to the revolution.

Two examples will prove the
point. The first is the case of the
Bumperets in Mexico. The Bumperets
are a group of workers who have
been exploited by the wealthy
classes. They have been forced to
work in terrible conditions, and
they have been paid very little.

The second example is the case
of the Bumperets in the United
States. The Bumperets are a group
of workers who have been exploited
by the wealthy classes. They have
been forced to work in terrible
conditions, and they have been
paid very little.

The Bumperets are not solutions
to the revolution, but they are
solutions to their own problems,
and therefore, they are solutions
to the revolution.
